

# Ostrich

Ostriches will nearly anything consume.  
They are farmed for their lovely plumes.  
Static electricity  
Collects dust naturally,  
Which assists them in cleaning their rooms.

Figure 1

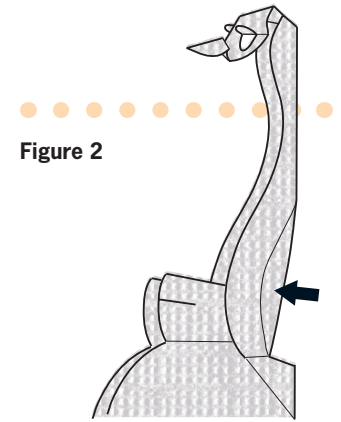

Figure 2

**1.** Score and cut the Ostrich template on page 115, using the basic instructions provided on pages 8–10. Remember to cut the eyes, the wings, and the opening at the bottom of the neck.

**2.** Fold along the scored lines, making the mountain and valley folds carefully. Pull up the eyelids. Then fold the beak and push it back over the face (figure 1).

**3.** Fold the neck in half, and push in the bottom from behind (figure 2).

**4.** Pocket-fold the body over the bottom of the neck and the hips over the tail. Raise the wings, and shape them correctly (figure 3).

**5.** Interlock the tabs at the chest (figure 4).

**6.** Shape the legs, following the scored lines (figure 5).

**7.** Color the finished ostrich, using the photo as a guide.
